

2.11A RMA Business Controls

Control Type: Advisory	Applies to architecture:	A1	A2	A3	A4	B
<u>Control Definition</u> Control Objective: Restrict transaction activity to validated and approved business counterparties. In-scope components: - RMA authorisations Note: The RMA authorisations are centrally managed through the RMA Portal. Operator PCs, GUI, connectors, and messaging interface are potential vectors for Relationship Management Application (RMA) management and reporting, not necessarily where the controls are implemented. Risk Drivers: - business conducted with an unauthorised counterparty						
<u>Implementation Guidance</u> Control Statement: Implement RMA controls to restrict transaction activity to effective business counterparties. Control Context: Implementing business controls that restrict transactions to the fullest extent possible reduces the opportunity for both the sending and receiving of fraudulent transactions. These restrictions are best determined through an analysis of effective business relationships where RMA is a mechanism to prevent unwanted traffic on a service by controlling who can send traffic and what type of messages can be exchanged. Implementation Guidelines: The implementation guidelines are common methods to apply the relevant control. The guidelines are a helpful way to begin an assessment but should never be considered as an audit checklist as each user's implementation may vary. Therefore, in cases where some implementation guidelines elements are not present or partially covered, mitigations as well as particular environment specificities must be considered to properly assess the overall compliance adherence level (as per the suggested guidelines or as per the alternatives). - RMA - Appropriate know-your-customer principles and due diligence is performed during the creation and maintenance of RMA relationships. - RMA relationships are reviewed annually (at least) to make sure that obsolete (unused, dormant, or unwanted) relationships are analysed and removed or revoked in a timely manner. Optional Enhancement: - Restrict the valid RMA relationships to the specific business profiles that are agreed with the counterparty.
